PATTERSON BATTERY SETS

No. 6 COLUMBIUM ANTI-CORROSION CELL

MODEL "BMC-3"—FLUSH OAK—6 VOLTS—75 AMP.

No Architect will deny that the old style of battery usually installed for Electric Signal Bells, Annunciators, Fire Alarms—Telephones—Door Openers—Elevator Signals—School House Work, such as Program Clocks, Secondary Dials, etc., has been more than unsatisfactory to him.

The "old style," "wired-up" shelf or box method always meant trouble for the client and sometimes for the architect also.

Why not change this from 1914 on, by putting in all specifications that go out of your office the following paragraph:

"The battery shall be a Multiple-Service Patterson Battery Cabinet—these insure flush or surface mount or such as required; of PROPER VOLTAGE to satisfactorily operate all signal apparatus in building and of sufficient AMPERE-CAPACITY to give two (2) years of uninterrupted service."

With this specification the contractor will give you and your client a Battery Set that will save far more than it costs!

75-100 and 150 Amp. Multiple-Service Outfits will do heavy service work that Motor-Generator and Storage Batteries used to be thought necessary to do, and at 1-10th the expense!

We'll gladly forward copy of Catalog 146, describing in detail ALL Line of Patterson Battery Sets
